💼 REL-01 Middleware — Developer Partnership Pitch (Short Version)

We've designed a model-agnostic middleware that provides safe, immersive adult creative interaction without collapsing into porn-mode or overblocking harmless expression.

It fills the "missing middle" between SFW and NSFW models.

We already have:

- full architecture

- safety framework

- interaction engine

- pattern recognition logic

- narrative safety model

- stabilizing mechanisms

- UX philosophy

- business use cases

- integration points

- pitch deck + white paper

We need a developer to build the prototype.
No upfront pay.
We share ownership.
Profit potential is enormous.

This is not a hypothetical tool —
 it solves real problems in:

- AI writing assistants

- companion/chat apps

- romance/fiction creators

- interactive story apps

- safety layers for indie AI tools

If you want to build something meaningful, ethical, and massively needed — this is it.
